

Vortex Spas

Swim spas.

Collection 2024 January

Swim spas

Entertain friends and family.

Your Vortex swim spa forms the hub of any gathering, keeping the adults and kids entertained in comfort and style.

Big enough for inflatable toys and deep enough for a water slide, we designed these swim spas with the family and kids in mind - believe us, they won't want to get out!

Affordable heated swimming.

People are choosing our swim spas and plunge pools over conventional options as heating a very large volume of water is expensive.

A swim spa not only has less water to heat, but when combined with our Hybrid Heat Pump, it's the most cost effective heated swimming pool option.

Relax and unwind.

Every Vortex swim spa comes with our renowned hydrotherapy seats, and most have a full, lay back lounger. Just sit and soak, massage your tired muscles or simply float in blissful silence.

Train at home, all year round.

Enjoy the convenience and health benefits of swimming all year round.

Your swim spa can be heated to the temperature of your choice - if you're an active swimmer, around 25 degrees is good, and if you simply want to relax in the pool, a little warmer (28 to 30 degrees) suits most people.

Vortex Spas'
features explained.

Superior hydrotherapy.

Vortex spas are designed to give you a world class hydrotherapy experience. Relax and enjoy our ergonomic seating design, individual jet pressure controls and the neck and shoulder therapy collar.

Hydroflow spinning jets

Take your hydrotherapy massage to the next level with our rotating Hydroflow jets. The rotating action eliminates jet fatigue - that feeling you get when a single flow of water hits the same spot.

To keep our Hydroflow jets spinning year after year we build them tough and without bearings. The unique axle design has been proven to keep on spinning long after many other designs have failed. Hydroflow jets are 100% backed by our 5 year replacement warranty.

High pressure volcano jet

The high pressure volcano jet may well be the best jet in the spa, with an impressive 700 litres of water pushed through every minute.

Take care of the pressure points in your feet for a soothing, reflexology style treatment or focus on overlooked areas such as your chest, hamstrings and lower back.

Hydrotherapy loungers

The lounger seat is usually the most comfortable and therefore the most coveted seat in the spa. These lay back seats are ergonomically designed and packed with an array of jets to provide massage therapy for your back, legs and feet.

Many Vortex spas have two lounger seats so there's no fighting over who gets to lie in it.

Individual seat jet pressure controls

Massage pressure is an individual choice, so a Vortex spa massage can be tailored to suit your preference. Individual seat pressure controls dial up the massage you desire.

Vortex spas also have individual jet pressure control. A simple rotation of the jet face will reduce or increase its pressure.

Neck therapy collar

The neck therapy collar is designed to relieve tension in the neck and shoulders using Hydroflow jets embedded in the underside of the collar.

The neck therapy system is a feature of many Vortex spas, and perfect for massaging away the stress and tension that commonly builds up in this part of the body.

Stainless steel jet casings

All Vortex spa jets are clad in 304 grade stainless steel cases.

These stainless steel cases not only assist in protecting the jets, they look great and add a layer of luxury and aesthetic appeal to your spa.

Vortex quality, built to last.

Vortex spas are built with quality, durable materials to withstand Australia and New Zealand's climate extremes. Backed by our industry leading warranties, you can trust that a Vortex spa is a sound investment that you will enjoy for many years.

Neck therapy collar

The neck therapy collar is designed to relieve tension in the neck and shoulders using Hydroflow jets embedded in the underside of the collar.

The neck therapy system is a feature of many Vortex spas, and perfect for massaging away the stress and tension that commonly builds up in this part of the body.

Timber free 'no rot' Permaframe

Spa pools should be built to withstand the worst that nature can throw at them. Traditionally, spa pools have used timber frames which can be susceptible to rot, mildew and vermin damage.

Vortex are the first manufacturer to offer timber free, thermoformed plastic framing across their entire portable spa range. Thanks to the durability of this Permaframe construction, Vortex proudly offer a lifetime warranty on the structural integrity of every spa frame

Thermobond 4 layer oven-cured shell

The shell of a spa is its most important component, so all Vortex spa shells are manufactured using a proprietary eight step, four layer process.

The acrylic surface is chemically bonded to vinyl ester resin for unsurpassed adhesion. A marine grade fibreglass layer is applied for torsional strength, before a final polyceramic layer is added for ultimate rigidity. Oven curing is used throughout the process to ensure optimal bonding.

No maintenance Thermoclad cabinet

Timber free Thermoclad cabinet panels are used exclusively throughout the range.

Manufactured by Vortex Spas, these cabinets are available in three architectural finishes and unlike wooden cabinets, require no ongoing maintenance.

High impact moulded ABS base

Spa pools are constantly subjected to water around their base, leaving the underside vulnerable to water ingress and significant damage to framing and equipment.

To prevent this, Vortex portable spas feature a high sided, moulded, high impact ABS base pan that keeps the frame and equipment protected.

9 shell / cabinet colour combinations

We know every customer and location is unique. With 9 beautiful shell and cabinet colour combinations, there's one to suit.

You can blend interior and exterior colour choices to create a personalised spa look, that complements your home environment.

Duraflex 'no kink' PVC plumbing

Spa pool plumbing has to put up with a lot of wear and tear. The constant movement of hot, chemically treated water can break down pipes and cause leaks and blockages.

To prevent this, Vortex spas and swim spas are plumbed with Duraflex plumbing, which is specifically designed for use with hot, chemically treated water.

Duraflex plumbing incorporates a coil of rigid PVC that will flex but not kink, ensuring equal jet pressure for the life of your spa.

Light up your night.

No other spa offers as many illumination options. Our innovative applications of LED lighting technology continues to lead the way on how spas are lit. Let Vortex spas light up your night.

Underwater LED floodlight

There's a powerful 7 bulb LED floodlight in every Vortex spa to ensure that night time spa use does not leave you lost in the darkness.

You can adjust the brightness of the floodlight, and set it to a colour and mode to suit your mood

Hydroglow jets and topside control lighting

The deluxe Hydroglow lighting option illuminates the water jets and topside controls for dramatic effect.

Up to 90 individual LED lights are embedded into the spa's jets and controls to make them glow beautifully.

Perimeter and cabinet lighting

The perimeter lights throw coloured lighting across the spa's surface creating a stunning waterline effect.

The cabinet lighting casts light on the ground and steps to ensure that getting in and out of the spa after dark is as safe as possible.

Programmable LED lighting effects

Our designers have developed a vast array of illumination options for your spa, all of which can be customised to suit your mood.

The Hydroglow system uses low energy LED bulbs which give 20 beautiful colour options.

Full control over the system is provided via the spa's control pad, with the ability to adjust the colour, brightness, sequencing and transition speed.

Vortex quality, built to last.

Vortex spas are built with quality, durable materials to withstand Australia and New Zealand's climate extremes. Backed by our industry leading warranties, you can trust that a Vortex spa is a sound investment that you will enjoy for many years.

Intelligent thermal tuning

Vortex spas use AI (Artificial Intelligence) software to measure and learn from individual spa usage and operational patterns.

This technology then adjusts heating cycles to minimise energy use, saving up to 20% of the spa's heating costs. Water temperature drops can be limited to within 0.2 degrees of your set temperature.

High density lockable spa cover

Because heat rises, most of the heat lost from your spa will be through the insulated cover.

Vortex spa covers are 50% denser than most other spa pool covers. Because we use 24kg/m³ insulation, this high density spa cover limits heat loss and further reduces the costs associated with heating the water.

Premium multi-layer insulation

Heat is also lost through the side of the spa shell, cabinet and base. To reduce this heat loss, Vortex spas are fitted with multiple layers of insulation, each designed for a specific purpose.

Unlike some spas that utilise single type, block or full foam insulation, the insulation system in Vortex spas can be removed for easy maintenance when required.

Hybrid heat pump

If energy savings are really important to you, Vortex offer an intelligent heat pump solution that can cut heating costs by as much as 75%.

Unlike other heat pump solutions, our hybrid heat pump integrates with the spa's artificial intelligence software to minimise run time, reduce energy costs and increase the longevity of the heat pump and the spa equipment.

Arctic pack insulation

For extra cold climates where temperatures dip below zero degrees, Vortex offer an Arctic Pack insulation upgrade. This upgrade supplements the standar multi-layer insulation system with an additional thick layer of perimeter insulation.

Whilst it dramatically lowers heat loss, the arctic system remains removable for easy maintenance, something that is not possible on full foamed spas.

You've got the power, and control.

A great spa experience requires industry leading technology from the world's best brands. Every Vortex spa and swim spa is fitted with best in class equipment to ensure years of pleasurable use.

Premium SpaNet control systems

In keeping with Vortex Spa's industry leading position on quality and performance, we have partnered with SpaNet, Australasia's pre-eminent spa pool equipment manufacturer, to provide their state of the art control equipment across the entire Vortex range.

No other spa brand offers such a high degree of functionality across their entire line up.

SpaNet jet pump(s) and air blower

To ensure that the quality and performance of our equipment suite is unsurpassed, Vortex Spas partner with SpaNet to develop water and air pumps that set the industry benchmark, and deliver high performance and longevity.

SpaNet variable output heater

A typical plug-in (10 or 15amp) spa heater shuts down when the spa's pump is activated. This allows the water temperature to drop - not what you want in the middle of your hydrotherapy.

When a Vortex spa pump is engaged, the heater detects in real time how much power is still available, and uses that power to keep the spa elements heating.

WiFi app-based remote control

By choosing the Vortex Smartlink WiFi option, you can control your spa from wherever you are in the world. This option is perfect for spas installed in holiday homes, or if you travel frequently.

Smartlink also incorporates a diagnostic mode that allows Vortex technicians to remotely analyse and potentially resolve any faults, should they occur.

SpaNet intelligent, silent circulation pump

The SpaNet silent circulation pump drives water through the filtration and heating systems with whisper quiet efficiency.

The filtration cycle duration can be programmed to match the spa's use. This limits energy use and wear and tear on pumps.

Vortex Spas use an intelligent algorithm to ensure that the pump will run for the minimum period to ensure hot, clean water, 24 hours per day.

Spa health indicator light

On a cold winter's night, running out to your spa only to find it has shut down due to a power trip or dirty filters is not a pleasant experience.

In order to avoid this situation, Vortex spas are fitted with an external health indicator light which turns red if the spa has performed a shut down.

Purezone water care system.

Vortex Spas feature the latest innovations in water care technology to deliver crystal clear water with minimal chemicals.

Purezone 2 stage filtration system

Vortex's water filtration system is unique. At the core of the system is a 5 micron disposable Purezone filter cartridge. The membrane used in this filter is the same membrane used in many drinking water filtration systems.

Unlike most spa filters that require regular cleaning, the Purezone filter requires no cleaning and can be disposed of every 3-4 months.

Purezone CD ozone water clarifying system

Vortex Spas' CD (corona discharge) ozone water clarification system keeps water clean and clear 24/7 by destroying organic material.

The ozone clarifier is fitted to every Vortex spa and swim spa to help reduce the need for additional chemical use and help keep your spa operating costs down

Purezone UV sterilising system

Vortex were the first spa company to utilise UV (ultra violet) light purification across their spa and swim spa range. This technology is usually found in commercial drinking water and public pool filtration systems.

High intensity, UV lights are used to kill viruses and bacteria in the water. Over time, UV can deliver a 99.9% kill rate making it mandatory if water cleanliness is important.

A premium in-spa experience.

Vortex spas are renowned for their quality, superior hydrotherapy and features that are usually reserved for the world's most expensive spas.

LED back-lit water cascade

The back-lit water cascade adds beauty and a touch of Zen to your spa experience, bringing the tranquil sound of gently running water to every Vortex spa and swim spa.

Back-lit laminar jet water feature

Laminar jets are beautiful and mesmerising. Be amazed as the back-lit LED light bends around the water stream and illuminates the splash point.

Genuine laminar jets are only available in a Vortex spa.

Non-slip, back-lit drink holders

It's important to stay hydrated whilst you spa, so Vortex spas are fitted with exclusive, non-slip drink holders to help keep your glass or cup visible and secure.

Best enjoyed with a clear vessel, the LED back-lighting gives your favourite beverage a coloured glow.

Bluetooth stereo system

The Vortex Bluetooth stereo system has been specifically designed to cope with the harsh environments a spa is exposed to.

Avoiding externally mounted speakers that can fail over time, we mount high fidelity transduction speakers inside the cabinet on the spa shell. This protects them from water and sun damage and turns your spa shell into a giant speaker.

Connect your device via Bluetooth or WiFi and control the music via a dedicated control panel.

Aromatherapy system

Aromatherapy has been used for thousands of years to enhance mood and relaxation. Vortex offer 12 fragrances ranging from relaxing lavender to invigorating citrus.

Unlike aromatherapy systems found on other spas, the Vortex system can be adjusted and turned off when not required.

Built in ice bucket/drinks chest

Some Vortex spas have a topside ice bucket to place your bottle on ice and keep it safe and cold.

Our top of the line Hydrozone swim spa has a built in drinks chest to keep a selection of drinks cold during a long hot summer.

Industry leading warranties.

We stand proudly behind every spa we make, offering warranties that are the envy of the spa industry.

10 year structural shell warranty

Most spa pool companies offer 'pro-rata' structural shell warranties. This means they reduce in value as the spa ages, leading to hefty costs to the owner if your spa shell structure fails in the latter part of its warranty.

Vortex Spa's warranty is non pro-rata. If your spa shell structure fails at any time within the 10 year warranty period, we will replace it. No questions asked.

Lifetime Permaframe warranty

Vortex Spas' rot free permaframe structure is guaranteed for life against a loss of integrity leading to the spa being inoperable.

5 year acrylic surface warranty

All Vortex spas have a 5 year, non pro-rata, acrylic surface warranty. This guarantees against any surface blisters that result in water loss for five years.

5 year jet, plumbing and heater warranty

Manufactured with the highest grade virgin plastics, our jets have an industry leading 5 year replacement warranty.

The plumbing system of all Vortex spas is warranted against leaking for 5 years, and the heater is warranted against defects for 5 years.

2 year pump and equipment warranty

The circulation pump, jet pump(s) and electronic control system in all Vortex spas is warranted against defects for 2 years.

Shell and cabinet colour options.

The Vortex spa colour palette is hand selected from the latest home design trends, and has been carefully created to complement any outdoor environment.

Shell colour options
